

Stand Expo Pack vol.2

Standard / Built-in setup

For convenience, make sure your project Rendering Settings are set to **Linear**.

Rendering Settings are located in **Edit > Project Settings > Player**

To achieve the same lighting setup as the screenshots seen on the Asset Store, install the **Post-Processing** plugin via the Download Manager, located in **Window > Package Manager**

When installed, create a **Game Object > 3D Object > Post-Process Volume**.

On the created Volume, assign the **Post-Process Profile** located in **StandExpoVol.2 > Settings > Built-in**. Create a custom Layer for the Post-Process Volume by clicking on the Default Layer and **Add Layer...**. Give any name to the new Layer, and go back to the Volume to assign it. Check **Is Global**.

Now add a **Post-Process Layer** component to the scene **Camera** :

Assign the **Layer** you just created to the component, and choose an **Anti-Aliasing** method.

URP setup

Packages that replaces shaders and materials are located in **StandExpoVol.2 > Settings**
Simply open the **Standard** or **URP** package after switching Render Pipeline.

Assign the provided **Global Volume Profile** located in **StandExpoVol.2 > Settings > URP**
to the Global Volume in the scenes.

Make sure you have **HDR** checked in your Render Pipeline settings.

Thank you ♥

If you have any questions, or simply want to say hello, feel free to contact us at contact@bk-prod.fr

We also have a **7 questions** survey over here :
